Tangerang, Banten, Indonesia

Fresh graduate in Informatics Engineering with hands-on experience in fullstack development, workflow automation, and Deep learning (Artificial intelligence)-based projects. Skilled in developing scalable backend and frontend services, end-to-end automation pipelines, and LSTM-based thesis project. Proficient in Go, Python, Node.js, Java, PHP and cloud technologies, with strong interest in software engineering, automation, and AI technologies.

Work Experiences

PT Sari Tirta Group. - Central Jakarta, Jakarta — Aug 2026 - Now

IT Programmer

- Developed a desktop procurement reporting application from scratch using Progress OpenEdge ABL, implementing date-based database queries and direct CSV/XLSX export to support reporting of PR, PO, and receiving data.
- Developing a mobile-based security patrol application using AppSheet, implementing QR-based shift/checkpoint scanning and patrol status recording to support digital security inspection workflows.
- Set up a WordPress + WooCommerce e-commerce project, including plugin installation, Payment Gateway installation, Shipping Gateway installation and front-end UI development as part of an ongoing internal project.
- Debugged and fixed a backend issue in the company's existing procurement web application, contributing to the maintenance of its internal business system.

PT Jababeka Tbk. - Cikarang, West Java — Feb 2026 - May 2026

Automation Intern

- Designed and implemented high-impact BPMN-based workflows to automate complex business processes and drive significant operational efficiency.
- Engineered high-performance Python-based Zeebe (gRPC) workers to seamlessly orchestrate asynchronous tasks. This strategic implementation significantly boosted system throughput and operational efficiency.
- Leveraged Docker to containerize and deploy services, driving 100% deployment consistency and eliminating environment- related friction for seamless, scalable delivery.
- Automated an end-to-end ETL pipeline integrating SQL Server and AI APIs, generating scheduled, visualization- rich PDF reports with automated insights to drive stakeholder decisions.
- Conducted comprehensive end-to-end testing, meticulously auditing data pipelines and transformation logic to ensure 100% accuracy in output validation and system integrity.

Education Level

Institut Teknologi Harapan Bangsa - Bandung, West Java — Aug 2021 - Sep 2026

Bachelor of Informatics, 3.12/4.00

- Completed Certiplus program, professional development in computer skills, communication, leadership, entrepreneurship, career planning and SAP course.

Projects

Implementasi OpenPose dengan Long-Short Term Memory untuk Deteksi Jatuh Berbasis Keypoints - Thesis research

- Implemented an end-to-end fall detection system using OpenPose for human pose estimation and LSTM for temporal activity classification.
- Processed 70 video samples by extracting 15 - 25 body keypoints and performing preprocessing/data augmentation for model training.
- Achieved up to 70% accuracy, 100% sensitivity, 62.5 % specificity in detecting fall incidents on the UR Fall Detection dataset.

AI CV Screening Automation with n8n - Personal project

- Built an n8n workflow integrating AI and JavaScript to screen CVs and generate structured candidate information with supporting reasoning.
- Generated PDF reports containing candidate data and AI reasoning for HR review.

Cipendawa Motor Website - Personal project

- Built a responsive workshop company profile using Next.js, TypeScript, and Tailwind CSS, with services, before-and-after galleries, branch locations, and contact links.
- Implemented a three-step reservation flow with a browser demo and a Go/Gin API backed by PostgreSQL for a local showcase.
- Added Jakarta-time validation and idempotent submissions; reservations start as pending and require manual confirmation.
- Stored reservations and simulated WhatsApp notification records in one transaction; integrated Instagram and Google Reviews widgets.

Organizational Experience

Himpunan Mahasiswa Teknik Informatika - **Bandung, Indonesia** Mar 2023 - May 2024

Logistic Staff

- Coordinated logistics operations for multi-team events, ensuring execution across participants and multiple stakeholders.
- Managed cross-functional communication, improving task alignment and reducing operational bottlenecks.
- Handled real-time operational issues, ensuring continuity under tight timelines.

New Student Orientation Program - **Bandung, Indonesia** May 2023 - Aug 2023

Technical, Mentor

- Contributed to the development and maintenance of a QR-based attendance system, supporting real-time tracking during large-scale events.
- Processed and validated attendance data to ensure accuracy and reliable reporting.
- Developed onboarding materials and user-friendly Documentations tutorial for new students, providing clear guidance on academic and organizational tools to accelerate adoption, improve productivity, and support independent learning.
- Provided real-time technical support and troubleshooting during live system operations.
- Mentored mentees by guiding their adaptation to the campus environment and academic system.

Certifications & Technical Skills

- (2026) **AWS Certified Cloud Practitioner**
- (2024) **AWS Academy Graduate - Cloud Foundations - Training Badge**
- (2024) **SAP Configuration**
- (2023) **SAP Introduction**
- **Programming Languages**: Python, Java, Go, PHP, JavaScript, TypeScript, Kotlin, Advanced Business Language.
- **Front-end**: React, Next.js, Tailwind, HTML5, CSS3.
- **Back-end**: Node.js, Gin, Django, REST API, Springboot.
- **Database**: PostgreSQL, MySQL, NoSQL.
- **Automation & Tools**: Knime, Camunda, N8N, Figma, Postman, Power BI, Tableau, Docker, Git, Progress OpenEdge, Appsheet.
